**Mr. S.Venkatesan, I B.Sc. (CS)**

**Mr.R.Rajesh Kumar, I B.Sc. (CS)**

## Editorial

We would like to wholeheartedly thank our honorable Chairman, Secretary, Executive Director and Principal for their continuous encouragement and constant support for bringing out the magazine. We profoundly thank our Head of the Department for encouraging and motivating us to lead the magazine a successful one right from the beginning. Ishare serves as a platform for updating and enhancing upcoming technologies in Information and Communication. We are grateful to all the contributors to this magazine so far. The magazine has been sent to almost 60 Institutions in and around Tamilnadu. So far we have received feedbacks and appreciations from various Institutions.

We would be very pleased to receive your feedbacks. Please send your feedbacks to [ishare@ksrcas.edu](mailto:ishare@ksrcas.edu)

# CONTENT

<b>S.NO</b>	<b>TOPICS</b>	<b>PAGE</b>
<b>1.</b>	<b>OPEN SOURCE SOFTWARE</b>	<b>4</b>
<b>2.</b>	<b>THE NOVICE GUIDE TO BUYING A LINUX LAPTOP</b>	<b>19</b>
<b>3.</b>	<b>OPEN SOURCE WEB-BASED PROJECT MANAGEMENT SOFTWARE</b>	<b>31</b>
<b>4.</b>	<b>PRESENTATION TOOLS</b>	<b>35</b>

## 1. OPEN SOURCE SOFTWARES

### 1) Replicant - Fully Free Android Distribution

Replicant is **entirely free and open source distributions of Android** on several devices including both phones and tablets. You can install apps from F-Droid store a GPLv2 client app that comes configured with a repository hosting only free as in freedom applications.

	<h1>Replicant</h1> <p>A fully free Android distribution</p>
Operating system : Linux/Android	
Purpose : Free os for phone/tablets	
Targets : User who wish to have a full control over the	

mobile phone with strong privacy settings

License : Apache License 2.0/GPL 2.0

## 2) Miro Video Converter

This is an open source, cross-platform application to convert videos from and to various formats, including formats suitable for devices such as Android/iOS phones. It is simple and easy to use software to **convert almost any video to MP4, WebM (vp8), Ogg Theora** format. Miro Video Converter is based on FFMPEG and act as a front end to FFMPEG command line tools.

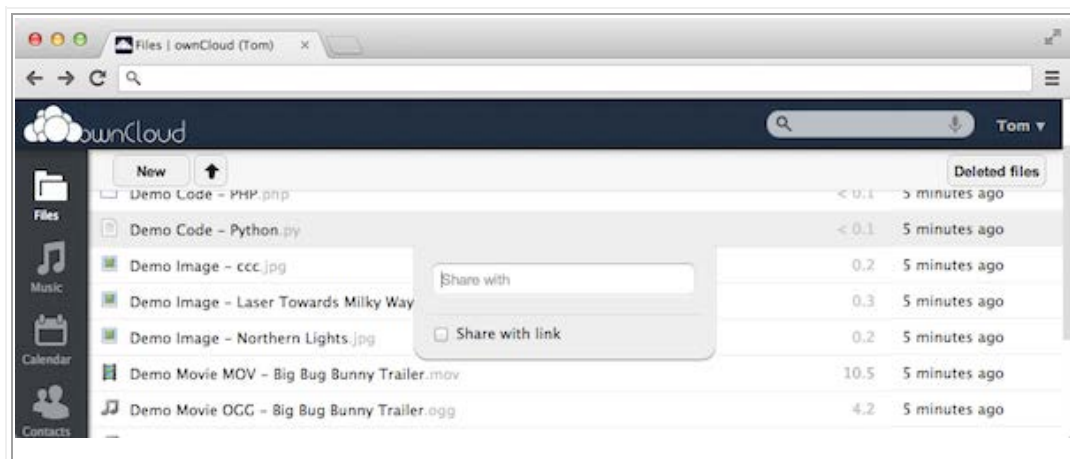

Operating system : Cross-platform
Purpose : Video converter
Targets : Multimedia users
License : GPL

### 3) Owncloud - Dropbox Alternative For Cloud Storage Service

An **alternative to Dropbox to run cloud on my own server** at home and office. This software is open source software, and it is self hosted. This software is easy to install and quite useful. I started to use it for syncing files and other data There are clients available for MS-Windows, OS X, Linux, and mobile apps for iOS and Android devices (or simply access data using the ownCloud web frontend).

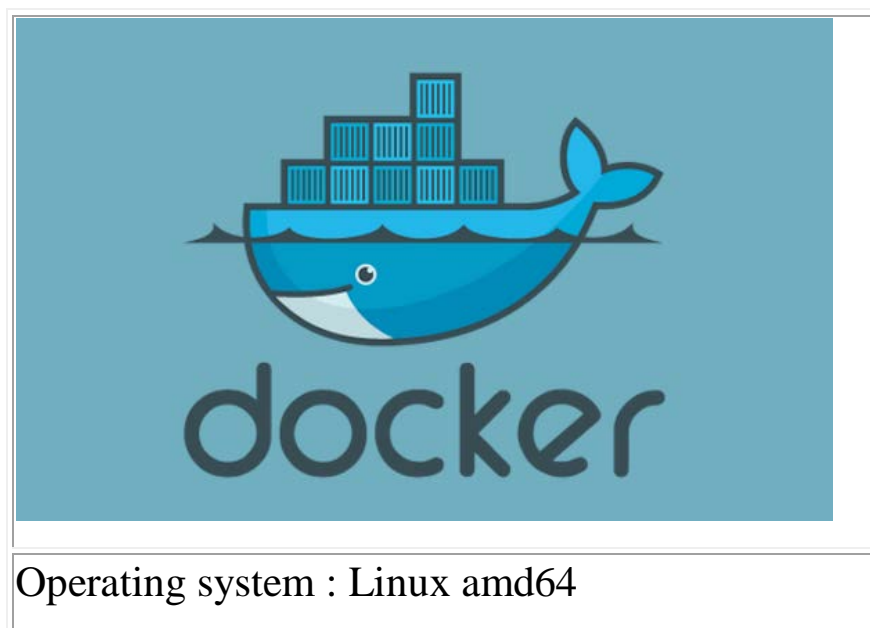

Operating system : Cross-platform
Purpose : Cloud storage (Data synchronization)
Targets : Home users/IT departments/Sysadmins

License : AGPLv3

#### 4) **Docker - FreeBSD Like Container+Api For Linux**

The FreeBSD jail provides an operating system-level virtualization partition a FreeBSD-based server into several independent mini-systems. We can do the same with Linux using OpenVZ. Linux Containers (LXC) is a virtualization method for running multiple isolated Linux systems. Docker extends LXC. It uses LXC, cgroups, Linux kernel and other parts to automate the deployment of applications inside software containers. It comes with API to runs processes in isolation. With docker we can pack WordPress (or any other app written in Python/Ruby/Php & friends) and its dependencies in a lightweight, portable, self-sufficient container. We can deploy and test such container on any Linux based server.

Purpose : OS level virtualization

Targets : DevOps/Sysadmins

License : Apache License 2.0

## 5) Adminer - A Lightweight And Full-Featured Database Management Tool

Adminer is a full-featured database management tool written in PHP. Conversely to phpMyAdmin, it consists of a single file ready to deploy to the target server. Adminer is available for MySQL, PostgreSQL, SQLite, MS SQL and Oracle. **Install this for clients who are new to PostgreSQL/MySQL.** The software acts as a drop-in-replacement for phpMyAdmin with a better user interface, better support for MySQL features, higher performance and more security.

The screenshot shows the Adminer 3.1.0 interface for a MySQL database named 'cds'. The 'Tables and views' section is active, displaying a table with the following data:

Table	Engine	Collation	Data Length	Index Length	Data Free	Auto Increment	Rows	Comment
<input type="checkbox"/> albums	InnoDB	utf8_czech_ci	16,384	32,768	94,371,840		4	Albums
<input type="checkbox"/> interprets	InnoDB	utf8_czech_ci	16,384	0	94,371,840		5	Interprets
<input type="checkbox"/> songs	InnoDB	utf8_czech_ci	16,384	16,384	94,371,840		15	
<b>3 in total</b>	InnoDB	utf8_czech_ci	49,152	49,152	0			

Below the table, there are buttons for 'Analyze', 'Optimize', 'Check', 'Repair', 'Truncate', and 'Drop'. The 'Move to other database' dropdown is set to 'cds'. There are also links for 'Create table', 'Create view', 'Routines', 'Events', and 'Create event'.

Operating system : Cross-platform

Purpose : Database management
-------------------------------

Targets : DBA/new users
-------------------------

License : Apache License or GPL 2
-----------------------------------

## 6) **Mariadb - Drop-In Replacement For Oracle Mysql Server**

MariaDB is a community-developed fork of the MySQL server. MariaDB is going to be default in many popular Linux distro and open source project. Red Hat will switch the default database in its enterprise distribution, RHEL (including its clones such as CentOS), from MySQL to MariaDB, when version 7 is released in 2014.

Operating system : Cross-platform
-----------------------------------

Purpose : RDBMS
-----------------

Targets : DevOps/Sysadmins
----------------------------

License : GPL/LGPL
--------------------

## 7) **Racktables - Manage Your Data Center Assets Like A Pro**

It is is a datacenter asset management system. With this software one can document hardware assets (such as server, workstations, routers, switches and more), network addresses, space in racks, networks configuration and more:

1. List of all devices, racks, and enclosures you've got
2. Mount the devices into the racks
3. Maintain physical ports of the devices and links between them
4. Manage IP addresses, assign them to the devices and group them into networks
5. Document your NAT rules, describe your loadbalancing policy and store loadbalancing configuration
6. Attach files to various objects in the system
7. Create users, assign permissions and allow or deny any actions they can do

RackTables

### **8) Apache Cordova - Create smartphone app just with HTML, CSS, and JavaScript**

Apache Cordova is a free and open source framework that allows you to create mobile apps using standardized web APIs. We can create apps that work on iOS, Android, BlackBerry, Windows, Ubuntu and other phone based operating systems. We write code once and run on selected mobile platforms with little or no change at all. PhoneGap uses Apache Cordova.

Operating system : iOS, Android, webOS, Symbian, BlackBerry, Ubuntu Touch, Windows Phone, Windows 8
---

Purpose : Build native mobile apps
------------------------------------

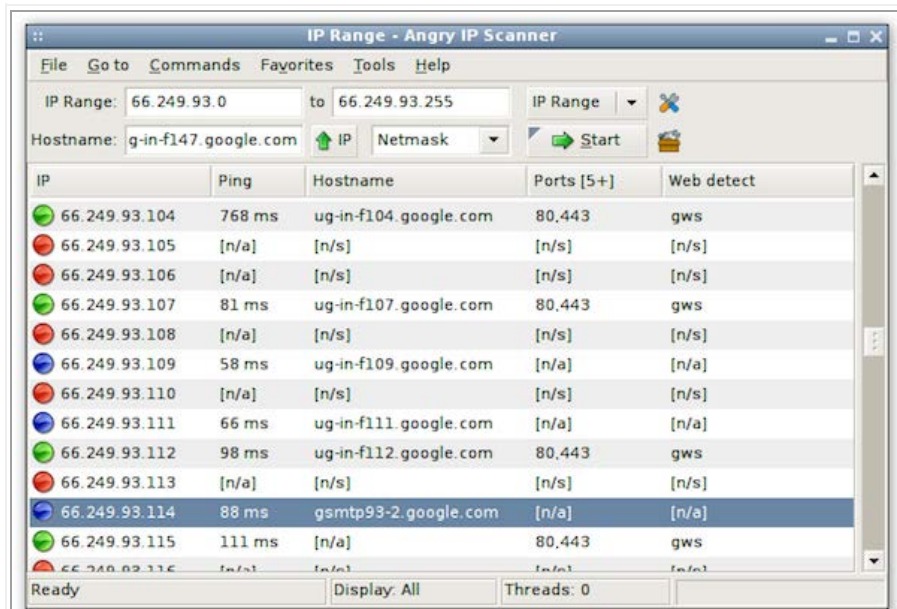

Targets : Developers
----------------------

License : Apache License 2.0
------------------------------

### **9) Angry IP scanner - ipscan tool**

Nmap is an open source security tool for network exploration, security scanning and auditing. ipscan (Angry IP Scanner) is an alternative to nmap command. It is also an open-source and cross-

platform network scanner designed to be fast and simple to use. It scans IP addresses and ports as well as has many other features.

Operating system : Cross-platform

Purpose : Network scanner

Targets : Sysadmin/Network administrators

License : GPL 2

### 10) Jekyll - Create simple static blog

Drupal, Typo3, WordPress and many other content management system (CMS)/blogging software dynamically create feature rich content. However, we may not need all the all features and complexity offered by modern CMS based systems. For example, a WordPress based blog like nixCraft requires multiple VMs, CDN for static assets,

caching engine such as memcached, PHP, mysql database, comment moderation, and on going updates. A growing trend is to keep your blog simple by avoiding CMS and use static HTML generators that offers the following benefits:

- No more complex setups i.e. no databases/php/caching engines required.
- No more comment moderation.
- Pesky updates.
- Static files are more secure.
- Easy to scale or cache on edge/CDN nodes.
- Provides all the blog-aware visual bells and whistles such as categories, pages, posts, Permalinks, and custom layouts.

Operating system : Cross-platform
Purpose : Blogging system
Targets : Bloggers who wish to follow KISS principal.
License : MIT License
Similar apps: Haskell based Hakyll, Ruby based nanoc, Python based Pelican.

## 11) TurnKey Linux - Deploy open source apps on VM or the clouds

We can setup a open source software such as WordPress, Drupal, ZenCart, and over 100+ other software easily with TurnKey Linux. It is a virtual appliance library that integrates and polishes the very best open source software into ready to use solutions. Each virtual appliance is optimized for ease of use and can be deployed in **just a few minutes on bare metal, a virtual machine and in the cloud/in physical server.** TurnKey Linux is based on Debian 7.2 with automatic security updates for all packages. It also includes a web management interface, web shell, and simple configuration console. This is often to **deploy development server** in the cloud.

Purpose : Virtual appliance library
Targets : Sysadmin/Developers/DevOPS
License : Free software licenses

## 12) *DokuWiki - Create a personal wiki*

DokuWiki is a simple to use and highly versatile open source wiki software that doesn't **require a database**. Easy to install on Linux or Unix-like operating systems with the following features:

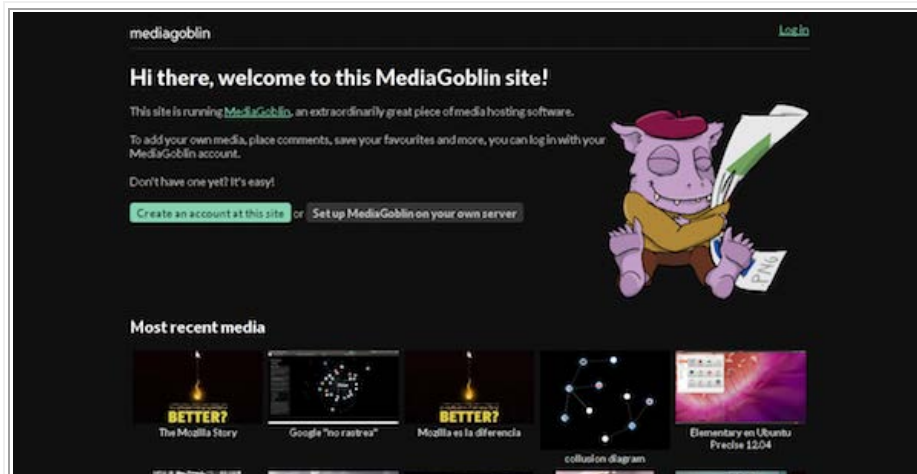

1. Ease of use and low system requirements.
2. Built-in access control lists.
3. Customization using large variety of extensions, plugins, and templates.

Operating system : Cross-platform
Purpose : Documentation
Targets : Wiki users.
License : GPL 2

## 13) *MediaGoblin - An alterative to Youtube/Flickr/Soundcloud*

GNU MediaGoblin is free software, decentralized media publishing platform. We can **host and share videos, music, and images**

using MediaGoblin. It is an **alternative to major media-publishing services** such as Flickr, deviantArt, YouTube, Soundcloud, etc. It is written in Python and SQL.

Operating system : Linux/OSX/MS-Windows

Purpose : Sharing many forms of digital media

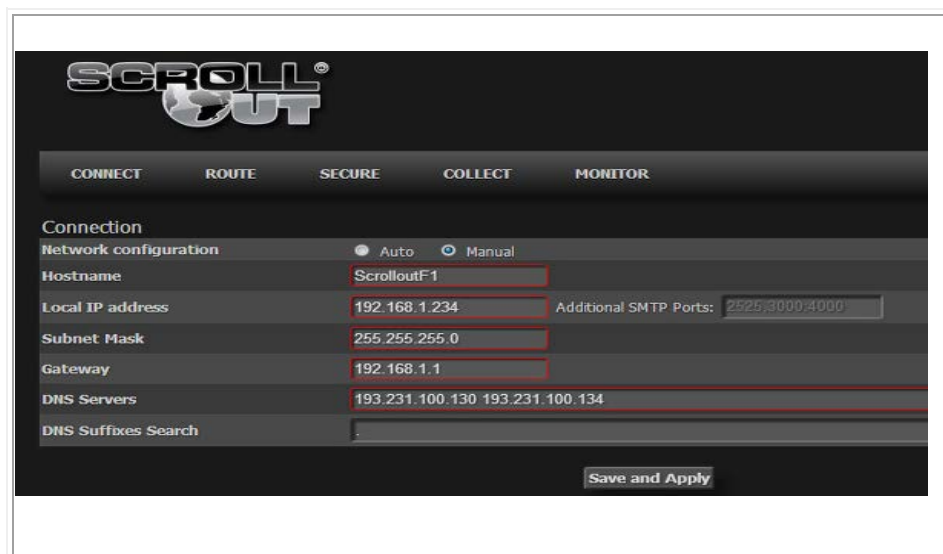

Targets : Freedom respectful media sharing self-hosted service

License : AGPLv3/CC0

#### 14) Scrollout F1 - Create email firewall gateway

Scrollout F1 is **easy to use and setup email firewall gateway** system. It includes anti-spam and anti-virus protection for Microsoft Exchange, Postfix, Exim, Sendmail, Qmail and others. It runs on Debian and Ubuntu Linux operating systems. This is **perfect software for filtering incoming messages** and other features are as follows:

1. TLS/SSL encryption with Perfect Forward Secrecy for SMTP & HTTPS
2. Virus scanning and different Quarantine per domain
3. Tagging and blocking SPAM at domain level
4. Geographic filtering for Sender IP, Server IP, URL IP and TLDs
5. Verifies incoming emails for DKIM and signs outgoing emails (2048 bits RSA)
6. Protection against fake messages that appear to come from your domain or from yourself
7. Protection against executable files, malicious content, scripts and more
8. Protection against forged domains like (fake) yahoo.com, gmail.com etc.
9. Whitelist and Blacklist
10. Simple web interface for management

Operating system : Linux

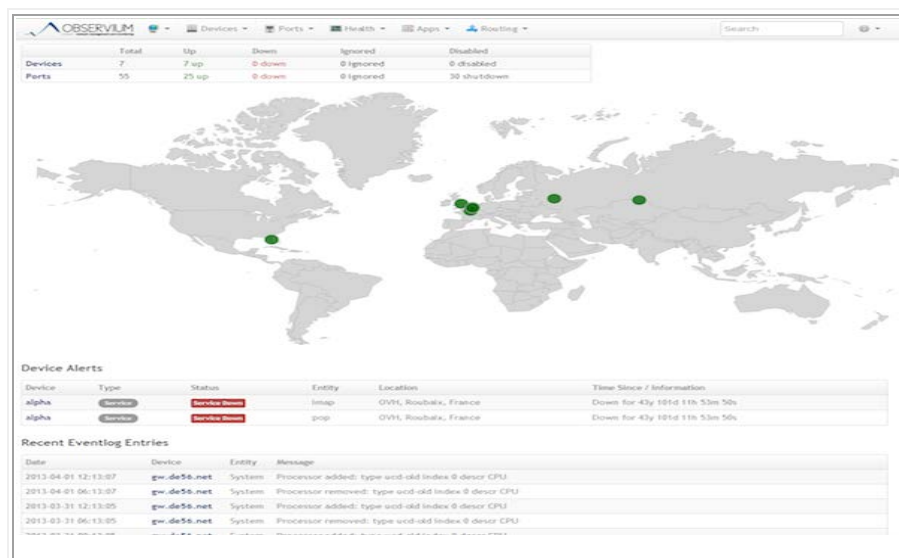

Purpose : Firewall and anti-spam gateway for MS-Windows/Linux/Unix-like email servers

Targets : Sysadmin

License : GPL

### 15) Observium - Network observation and monitoring system

Observium is free and open source software written in PHP/MySQL. It collects data from devices using SNMP and presents it via a web interface. It includes support for a wide range of network hardware and operating systems including Cisco, Windows, Linux, HP, Dell, FreeBSD, Juniper, Brocade, Netscaler, NetApp and many more. It provides historical and current performance statistics, configuration visualization and syslog capture.

Operating system : Linux/Unix-like
Purpose : Network monitoring
Targets : Sysadmin
License : Observium License

(Continued in next issue)

## 2. THE NOVICE GUIDE TO BUY A LINUX LAPTOP

All major laptop (notebook) hardware is supported by Linux. The important things to take into account when looking to buy a Linux powered laptops are as follows to avoid any hardware compatibility problems. Selecting correct specification is important.

### *Laptop Usage*

First, you need to decide and define the purpose of your laptop. Linux laptop can be used for simple office tasks and browsing the Internet or sending e-mails, than a mid-range laptop may be good enough:

1. Define your budget
2. Define screen size notebook (13" or 15" or 17")
3. Define your tasks such as Internet, sys admin, software development, some gaming using Win Vista / 7, dual booting etc.
4. How many hours of battery life do you need?
5. Define optical media types - Do you want to watch movies using DVD or Blu ray? Do you want to burn DVDs?
6. To play games you need a top spec laptop. Please note that Linux has limited support for popular PC gaming titles. So you need to dual boot your laptop with MS-Windows operating systems.
7. Finally, some people prefer desktop replacements with mobile workstations.

In short, decide how you are going to be using the Linux laptop.

### ***Central Processing Unit (CPU)***

CPU is the brain of your laptop. Linux supports all sort of mobile cpus. Linux does supports SMP cpus on servers and it does support portables cpus too. The following are well known mobile cpus:

- Intel Atom
- Intel Core 2 Duo
- Intel Core i5 Duo
- Intel Core i7 Duo or Quad

- AMD Athlon 64 Mobile
- AMD Turion 64 X2

The speed range from 1.3GHz to 2.2GHz or more. The number of cores plays an important role too. Naturally, a quad core CPU should be able to increase the number of calculations. This is useful when you run multiple applications, you will get fast and smooth response from the system. The Intel Core 2 Duo or AMD Turion 64 II (dual core) is pretty popular choice for CPU. My advice is go for 64 bit CPU with 64 bit Linux distro.

### ***Video Card and X Server***

This is the most important part in Laptop which is used by X Windows. However, selecting correct Video card is important; otherwise you will end up with 3D hardware accelerated card with 2D Linux driver or just basic display. So make sure your video card with 3D acceleration is supported under Linux. Nvidia has pretty good support with a proprietary driver which can deliver full 3D acceleration with 24 bit color. On other hand ATI drivers are open source. My advice is simple visit the following driver pages and make sure your video card is fully supported including 3D acceleration:

- ATI/AMD Linux drivers
- Nvidia Linux drivers

- Linux Graphics drivers from Intel

Look at X.org to check, if your graphics card / chipset is supported or not.

### ***Low End Video Cards***

The following list summaries low end fully supported Linux video cards:

- Intel GMA 4500MHD
- Intel 945GM
- Intel 950 GMA
- Intel X3100 GMA
- NVIDIA Quadro NVS 160M (256MB)

### ***Mid to High-End Video Cards***

The following list summaries mid-high end priced fully supported Linux dedicated video cards (useful for playing 3D videogames or engineering Linux apps or video / photo editing):

- NVIDIA Quadro FX 880M (1024 MB)
- NVIDIA Quadro FX 2800M (1024 MB)
- NVIDIA Quadro NVS 3100M (256 or 512 MB)
- NVIDIA GeForce 9300M GS
- NVIDIA GeForce 9300M

- Intel GMA X4500 HD
- ATI FirePro M7740 (1024 MB)
- ATI Radeon HD 3650 (512 MB)
- ATI Mobility Radeon HD4650 (1024 MB)

Finally, make sure external X display to your desktop monitor is fully supported. This can come handy when you want to watch movies, play games or do business presentation.

### ***RAM***

RAM (Random Access Memory) is another factor which can boost your speed easily, especially if you use RAM intensive apps like virtualization desktop software (e.g., [VMWare](#) or VirtualBox), photo editing (e.g., Gimp), [video editing](#) etc. 2 to 4 GB should be more than sufficient for most apps. A few high end laptops can support upto 16GB ram and Linux can [access more than 4GB ram using PAE or 64bit](#) kernel out of the box.

### ***Hard Disk***

Hard disk is used to store all your data and boot into Linux. Hard disks are cheaper, nosier and stores data on moving parts called rotating platters. You can have 7200rpm drives. Another option is to use SSD ( Solid State Drives ) as storage device which offers the following benefits:

1. Speed (2 times faster than hard disk)
2. Lighter and quieter (no moving parts)
3. Consume less power
4. Faster booting time.

You can add additional storage using USB or Firewire ports (i.e. external hard disk). My advice is go for SSD.

### ***Optical Disk***

Linux does support DVDs, Blu ray and other optical formats. This is useful for playing DVDs or backing up data via DVD/CD burner. DVD burner is fine for most applications. But, if you are interested in playing movies using Blu ray (HD DVD / Blu Ray disks), you will need to get Blue ray optical drive which can *read and write DVDs too*. However, the AACS 'Digital Rights Management' system in most HD-DVD and all Blu-Ray discs attempts to stop consumers from exercising fair use rights, including - playing purchased Blu-Ray and HD DVD films using Open Source software. To play Blu ray you need the latest version of mplayer and DumpHD to perform the decryption necessary to play the film. If you can afford go for Blu ray. See how to play Blu-Ray and HD DVD video under Ubuntu Linux.

### ***Power Management: Suspend and Hibernate***

Linux supports both AMP ( Advanced Power Management ) and ACPI (Advanced Configuration and Power Interface ) which allows you to hibernate the system to a disk partition using swsusp (Software Suspend). It is a suspend-to-disk implementation in the 2.6 series Linux kernel. However, some laptop may give you problem with swsusp. You may also need to compile kernel to include swsusp support. Make sure you get ACPI compliant BIOS and you should be fine with power management. Some time you may need to download a patch from 3rd party or vendor site to enable suspend and hibernate support under Linux.

### ***Wireless 802.11***

Another hardware device may not work at all; if you do not pay attention to wireless devices. Most laptops comes with on-board 802.11 (a/b/g/N) wireless cards. Not all card supported so make sure you get Intel Pro series card such as 3945 or Atheros based cards. My advice is use Google to search for your driver or use specialized databases (a more or less complete listing of wireless devices with information about the chipset they are based on and whether or not they are supported in Linux) to search for your laptop card.

## ***Biometric Fingerprint Scanner***

Fingerprint scanners are security systems of biometrics. If you work for Government, DoD, police, security industries and, if data security and authentication is your top priority, you need "Biometric Fingerprint Scanner". Every fingerprint is special and different from each other. You can use Linux PAM to hook fingerprint reader with KDM, GDM, sudo, su and many other services. The fingerprint scanners on the following models are known to work:

- IBM ThinkPad T and X series selected models
- Dell Latitude selected models
- HP Pavilion (selected model)

Please refer the following additional pages and make sure your laptop model is supported:

- The fprint project aims to plug a gap in the Linux desktop: support for consumer fingerprint reader devices.
- Fedora project wiki page describing supported devices and software for fingerprint devices.

## ***Fn key (BlueKey) Support***

Fn, or Function, is a modifier key on many keyboards, especially on laptops, used in a compact layout to combine keys which are usually

kept separate. It is mainly used for the purpose of changing display or audio settings quickly, such as brightness, contrast, or volume, and is held down in conjunction with the appropriate key to change the settings. These features may be supported under Linux via driver or software. I found most laptop from reputed manufacture (such as Dell, IBM) does supports Fn keys.

### ***Ports***

The following are common ports for laptop:

1. **USB** - It is well supported under Linux for external hard disk, pen, mouse, keyboard and much more.
2. **FireWire** - It may or may not work out of box. In most cases you need to compile the Linux kernel so that you can access Zip drives, hard drives, and CDRW/DVD drives. However, support is limited.
3. **eSATA** -External SATA provides a variant of SATA meant for external connectivity. It allows you to connect external SATA hard drives directly to the SATA bus. You get faster speed as compare to USB or Firewire external hard disks. This may or may not work out of box.

### *Sound*

Most on board sound card should work fine with Linux. You can play all sort of music file such as .mp3, .wav, .ogg and much more. Linux comes with various playback and mp3 players.

### *Docking Station (Port Replicator)*

A Docking station and port replicator provides a simplified way of “plugging-in” an electronic device such as a laptop computer via common peripherals. You can plug desktop monitor, keyboard, printer, mouse, Palm Pilot and so on. Most docking station should work out of the box. Just confirm this with your vendor.

### *Ethernet (NIC)*

Most NICs are supported but it is a good idea to go through Google and make sure your Ethernet card is supported. Usually, Intel and Broadcom (tg3) Ethernet cards are well supported. Usually, most drivers are included in running kernel. In rare case you may have to compile the kernel or driver to support your Ethernet card.

### **Tip: Test Your Laptop With Linux (Try Before You Buy)**

Most vendors have a showrooms and shops. Visit nearest shop with Linux Live CD (such as [Knoppix](#) or [Ubuntu](#) or [Fedora](#) ) and ask them to boot laptop using Live CD. See if it works or not; boot into

Linux. Make sure you can see X Windows, connects to the Internet via wireless card and so on. If you get 100% result, then just purchase it.

### ***Recommend Linux Distribution***

Linux is all about choices. Mostly recommended are:

1. Ubuntu (any flavor) Linux - For the average user, with a strong focus on usability and ease of use and installation.
2. Fedora Linux - Another popular disro for the average user with rpm based packages. Fedora is also popular among Windows and UNIX sys admins.
3. OpenSuse Linux - Easy to use and certified on selected HP / IBM laptops.
4. Debian Linux - For the advanced users, sys admin and academic researchers.
5. Slackware Linux - One of the oldest distro, preferred by sys admins, BSD lovers and academic researchers.

### ***Linux Laptop Vendors***

Now, you know how to choose a laptop, especially you need to pay attention to wireless, video card and Ethernet card. And here is exact model names & number that will be fully compatible to LINUX and vendor website.

1. Dell sales Ubuntu Laptop in **USA, Canada, UK, France, Germany, Spain and Latin America**. Dell India also sales high end Redhat Linux based laptop for business use.
2. HCL provides Ubuntu / Redhat / Fedora Linux based laptop in **India**.
3. Acer India provides Aspire series Linux based laptop in **India**.
4. HP Novell / Sues Linux certification and support matrix for HP laptops.
5. Asus Linux based eeepc netbooks in **USA, India, UK, and various other places** across the globe.
6. EmperorLinux provides Linux laptops with full hardware support under Linux in **USA**.
7. LinuxCertified provide Linux laptop and support in **USA**.
8. Linuxemporium provide Linux laptop and support in **UK**.
9. System76 provides Ubuntu Linux laptop and support in **USA and Canada**.
10. Zareason provides Ubuntu Linux laptop in **USA**, but claims to ship to many **other places across** the globe.

### **3. TOP 10 OPEN SOURCE WEB-BASED PROJECT MANAGEMENT SOFTWARE**

Project management software is not just for managing software based project. It can be used for variety of other tasks too. The web-based software must provide tools for planning, organizing and managing resources to achieve project goals and objectives. A web-based project management software can be accessed through an intranet or WAN / LAN using a web browser. No need to install any other software on the system. The software can be easy of use with access control features (multi-user). The project management software is used for all the projects (for e.g. building a new cluster farm) for issue / bug-tracking, calender, gantt charts, email notification and much more.

Use the following top 10 software for personal or business use. Keep track of all the projects in one place and finish them successfully on time.

#### ***1: Codendi***

Codendi is an open-source collaborative development platform offered by Xerox. From only one interface, it gathers, all the needed

tools for software development teams: management and versioning of code, bugs, requirements, documents, reporting, tests etc. It is mainly used for managing software project processes.

## ***2: Redmine***

Redmine is a flexible project management web application. Written using Ruby on Rails framework, it is cross-platform and cross-database. It includes calendar and gantt charts to aid visual representation of projects and their deadlines.

## ***3: ProjectPier***

ProjectPier is a Free, Open-Source, self-hosted PHP application for managing tasks, projects and teams through an intuitive web interface. ProjectPier will help your organization communicate, collaborate and get things done Its function is similar to commercial groupware/project management products, but allows the freedom and scalability of self-hosting.

## ***4: Trac***

Trac is an open source, web-based project management and bug-tracking tool. Trac allows hyperlinking information between a computer bug database, revision control and wiki content. It also serves as a web

interface to a version control system like Subversion, Git, Mercurial, Bazaar and Darcs.

### ***5: Project HQ***

Project HQ is a collaborative open source project management tool, similar to Basecamp and activeCollab. Project HQ is built on open source technologies like Python, Pylons and SQLAlchemy and is fully database independent. Project HQ uses a structured workflow to assist you in managing your projects.

### ***6: Collabtive***

Collabtive is a web-based project management software that is being published as Open Source software. The project was started in November 2007. It strives to provide an Open Source alternative to proprietary tools like Basecamp or ActiveCollab.

### ***7: eGroupWare***

eGroupWare is a free open source groupware software intended for businesses from small to enterprises. Its primary functions allow users to manage contacts, appointments, projects and to-do lists.

It is used either via its native web-interface, making access platform-independent, or by using different supported groupware clients,

such as Kontact, Novell Evolution, or Microsoft Outlook. It can also be used by mobile phone or PDA via SyncML.

### **8: *KForge***

KForge is an open-source (GPL) system for managing software and knowledge projects. It re-uses existing best-of-breed tools such as a versioned storage (subversion), a tracker (trac), and wiki (trac or moinmoin), integrating them with the system's own facilities (projects, users, permissions etc). KForge also provides a complete web interface for project administration as well a fully-developed plugin system so that new services and features can be easily added.

### **9: *OpenGoo***

It is a complete online solution focused on improving productivity, collaboration, communication and management of your teams. OpenGoo main features include document management, contact management, e-mail, project management, and time management. Text documents and presentations can be created and edited online. Files can be uploaded, organized and shared, independent of file formats.

### **10: *ClockingIT***

ClockingIT is a free Project Management solution, which helps your team stay focused and on top of things.

## 4. PRESENTATION TOOLS

### Presentation Assistant

#### **Shareware**

The program allows you to draw on the screen during presentations. You can also zoom and draw various shapes and texts on certain portions of the screen. You can play background music and open any document easily during the presentation. With the screen annotation tools, you can draw all kinds of lines, rectangles, circles, or add text marks or picture marks on the screen.

### ActivePresenter

#### **Shareware**

ActivePresenter is a screen capture application. The program helps you make your presentations more interactive with the help of various tools and features. The developer also offers various video tutorials that can help you understand and use the program more easily.

## **iPixSoft Flash Slideshow Creator**

### **Shareware**

iPixSoft Flash Slideshow Creator is a program that helps you turn digital photos and video clips into flash slideshows, thumbnail galleries, flash albums and flash presentations. The program contains designed templates, transition effects, text captions and background music.

## **Wondershare PPT2Video Pro**

### **Shareware**

This application converts PPT files to videos. One of its most remarkable advantages is the fact that it supports a very wide range of output video formats (including popular ones like AVI, MP4, 3GP, FLV, MOV or MPEG). It offers a lot of predefined profiles that let you quickly create video files which are perfectly compatible with various devices such as Zune, iPod, iPad, iPhone, etc.
