Modes of Transfer

- The binary information that is received from an external device is usually stored in the MEMORY UNIT.
- The information that is transferred from the CPU to the external device is originated from the memory unit.
- CPU merely processes the information but the source and target is always the memory unit.
- Data transfer between CPU and the I/O devices may be done in different modes.
- Data transfer to and from the peripherals may be done in any of the three possible ways
 - Programmed I/O
 - Interrupt initiated I/O
 - Direct memory access (DMA)

Accessing a Database from an ASP Page

The common way to access a database from inside an ASP page is to:

1. Create an ADO connection to a database
2. Open the database connection
3. Create an ADO recordset
4. Open the recordset
5. Extract the data you need from the recordset
6. Close the recordset
7. Close the connection

J.Rathi is presenting

Basic Web Controls in ASP .NET

Introduction

- Web controls are basically HTML factors wrapped below handy according to makes use of scripting tags about ASP+ then provide rich performance into you FORMs then pages.
- Web controls range from easy textual content field according to develop grids then lists.
- Some about the controls as information grid may be sure after information sources a lot like Visual Basic information sure controls.

#Tutorial Web Controls in ASP.NET

- Some of Standard control of ASP.NET.

 1. Label Control
 2. TextBox Control
 3. Button Control
 4. ChechBox Control
 5. RadioButton Control
 6. HyperLink Control
 7. Image Control

MULTI DIMENSIONAL ARRAY

- An array of three or more dimension are called multi-dimensional array.

The general form of a multi dimensional array is **data type array-name[s1][s2]...[sn];**

- Where si is the size of the ith dimension

Examples:

```
float sales[4][5][12]; //4*5*12=240 elements  
int table[2][4][5][8]; //2*4*5*8=320 elee
```

- Where sales is the three dimensional array, c 240 float type elements.

Ethical Issues Raised by Financial Changes

- According to the Pew 2015, "Newspaper ad revenue declined 4% year over year to \$19.9 billion—less than half of what it was a decade ago."
- Many social media and aggregator sites have reported significant revenue in advertising dollars.
- Advertising has not supported legacy media on the web as it did when news organizations produced only physical-world products.
- "For all of these legacy news sectors, significant digital revenues remain largely on the wish list. None get more than a small share of their total revenue from digital, even though digital ad revenue across all media grew 18% in 2014 to \$50.7 billion, according to eMarketer"

VoLTE 32% 12:52 p.m.

Aggregation and Plagiarism

- Aggregation collects or points to information available from a variety of sources elsewhere on the Web. "News aggregation typically includes a hyperlinked headline, a citation to the original source and brief description of content."
- Most publisher web sites encourage link backs and canonical tags acknowledging them as original content generator.
- Linking drives traffic back to the original source and canonicals allow webmasters to prevent content duplication issues thus aiding in search engine optimization.
- News aggregators heavily rely on fair use doctrine and driving traffic back to original source.
